

EcoStatus: We're living GREEN!

 Plastipak is committed to reducing their environmental footprint at all levels of business.

RAW MATERIAL

- » All of our products are made from **Recyclable Plastic**.
- » All of our containers are **Reusable** (the purest form of Recycling).
- » We are continuously looking for ways to **Reduce** the amount of plastic we use when manufacturing our containers. By using an array of high-performance, light-weight, cost effective resins we have, over the past 10 years, decreased the weight of our containers by up to 30% while maintaining their structural integrity.
- » **Source Reduction** - by reducing our overall raw material requirements through light-weight options there are significant environmental benefits.
- » We sell all our scrap material to other manufacturers who use it to produce **Second-Generation Products**.

PACKAGING

- » All of our carton is made from **100% recycled fiber**.
- » **Optimized Case Pack** sizes ensure that our carton consumption is kept to a minimum.
- » All our packaging **is purchased locally**.

TRANSPORTATION

- » Plastipak Industries has **3 strategically located manufacturing facilities** which allow us to manufacture our customers' products in the facility closest to the destination thereby reducing the distance our products travel.
- » In addition to **conserving resources** by using lighter stronger more efficient resins this also translates into lighter loads and **fewer trucks and railcars** are needed to ship the same amount of product.

30 TASCHEREAU BLVD, SUITE 210

+ Going forward...

Plastipak's new line of IML ready, square containers has been designed as the environmental option.

- » **Light-weight, Recyclable, Re-usable**
- » **Square** = increased transportation efficiencies for the empty containers shipped from our facilities as well as the filled containers from our clients.
